

# CLASS SCHOOL SUBJECT SURVEY

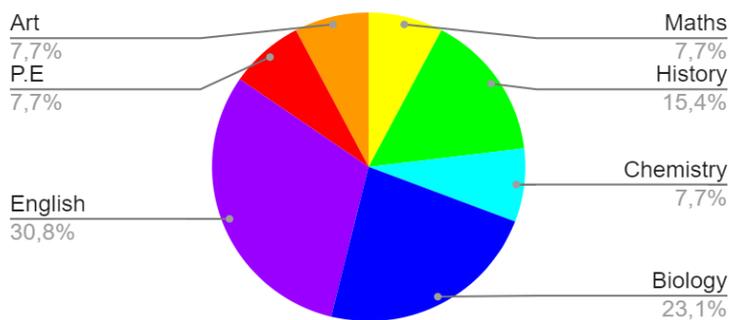

by Justė Padimanskaitė 8a

The goal of this report is to present the results of the survey about school subjects. The report contains information collected from my thirteen classmates. The students were asked five questions about school subjects.

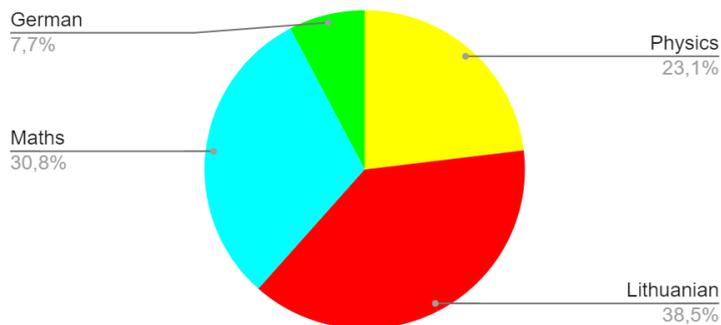

The majority of the respondents reply that English is their favourite subject. Also, about slightly over thirty percent of classmates really like biology. What is very clear from the second chart is that students' least favourite school subject is Lithuanian. In the third diagram it can be seen that a few respondents would like to include French into our school curriculum. I am really surprised to see that more than sixty percent of classmates can do their homework in one hour. It can be seen that no one does their homework in three hours or more. Also, in the last graph almost forty percent of respondents state that if they could not participate in one school subject for a year, they would not participate in maths.

To sum up, I'm really surprised that more than seventy percent of my classmates can do their homework in a short time.

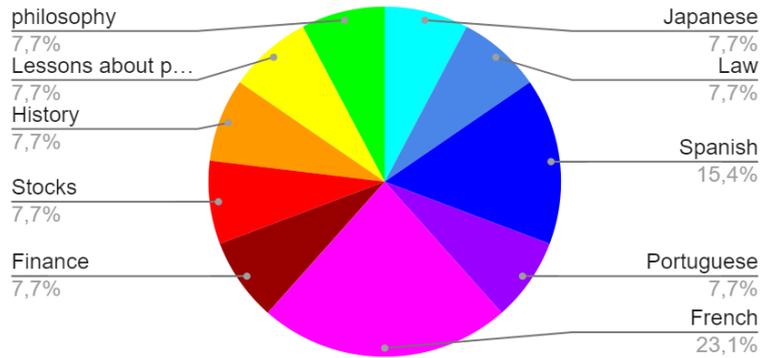

## What is your favourite school subject?

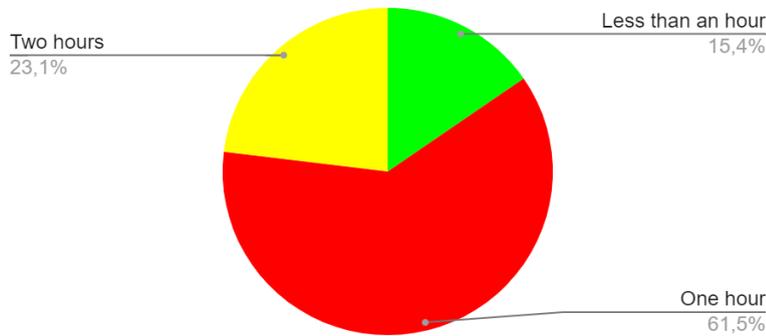

## What is your least favourite school subject?

## What school subject would you include into our school curriculum?

## How many hours does it take you to do your homework?

## If you could not participate in one school subject for a year, what subject would it be?
